Login As Admin or Organizer

Admin Login

username: admin / password:admin

Username

Password

Login as Admin

Organizer Login

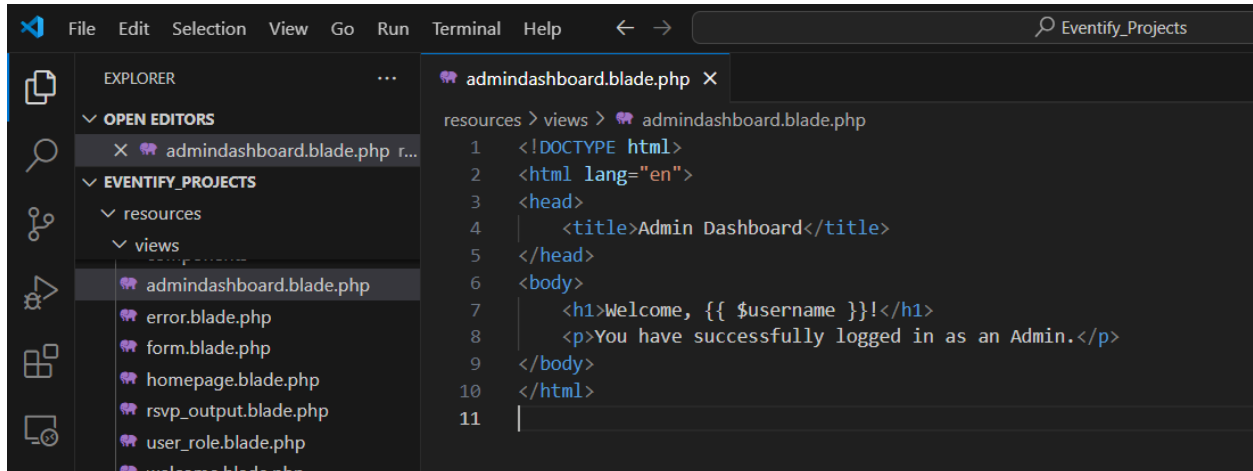

username: organizer / password:organizer123

Username

Password

Login as Organizer

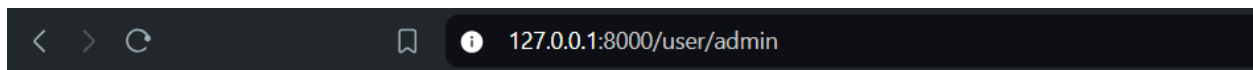

Admin Dashboard (Source Code)

The screenshot shows the Visual Studio Code editor interface. The Explorer sidebar on the left displays the project structure for 'Eventify_Projects', including folders 'resources' and 'views', and a list of Blade template files. The 'admindashboard.blade.php' file is selected and open in the main editor. The code is a Blade template for an admin dashboard, featuring a title 'Admin Dashboard' and a welcome message for the user 'Admin'.

```
resources > views > admindashboard.blade.php
1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4   <title>Admin Dashboard</title>
5 </head>
6 <body>
7   <h1>Welcome, {{ $username }}!</h1>
8   <p>You have successfully logged in as an Admin.</p>
9 </body>
10 </html>
11 |
```

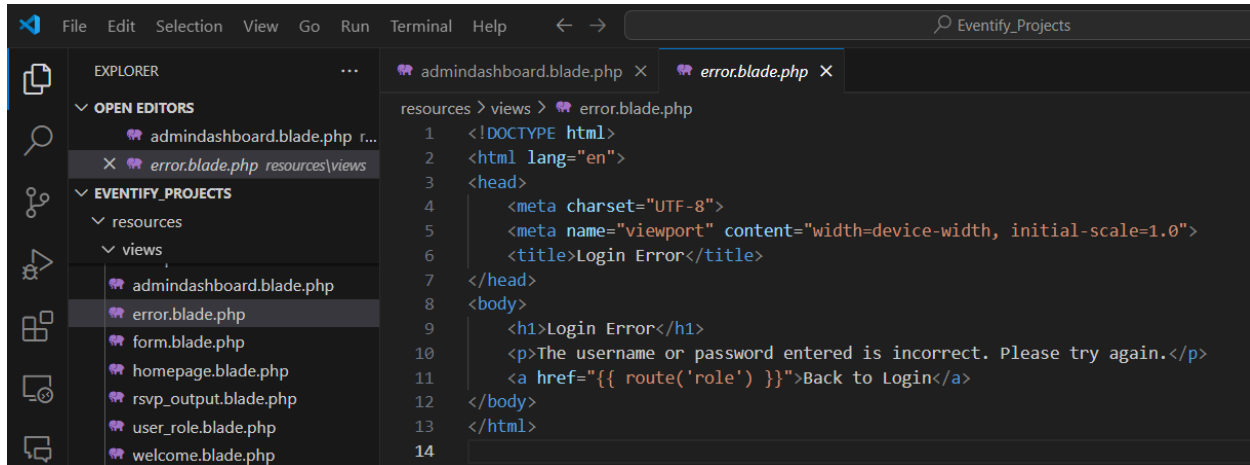

Currently this is the admin page looks like (temporarily) when the admin Log in

Welcome, admin!

You have successfully logged in as an Admin.

Error Login Page (Source Code)

The screenshot shows the Visual Studio Code editor with the 'error.blade.php' file open. The Explorer panel on the left shows the project structure with 'resources' > 'views' > 'error.blade.php' selected. The main editor area displays the following code:

```
1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4   <meta charset="UTF-8">
5   <meta name="viewport" content="width=device-width, initial-scale=1.0">
6   <title>Login Error</title>
7 </head>
8 <body>
9   <h1>Login Error</h1>
10  <p>The username or password entered is incorrect. Please try again.</p>
11  <a href="{{ route('role') }}">Back to Login</a>
12 </body>
13 </html>
14
```

This is the Display if the admin or organizer inputted wrong credentials

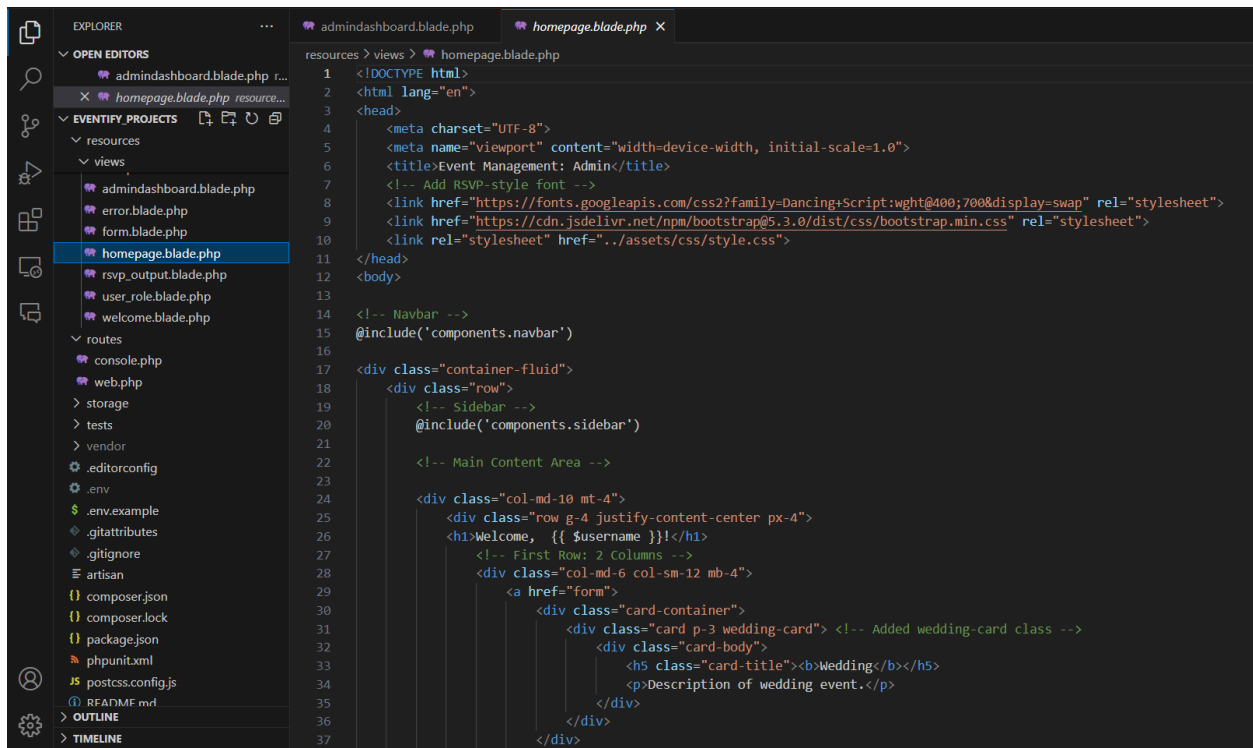

Login Error

The username or password entered is incorrect. Please try again.

10  <link rel="stylesheet" href="../assets/css/style.css">
11 </head>
12 <body>
13
14 <!-- Navbar -->
15 @include('components.navbar')
16
17 <div class="container-fluid">
18   <div class="row">
19     <!-- Sidebar -->
20     @include('components.sidebar')
21
22     <!-- Main Content Area -->
23
24     <div class="col-md-10 mt-4">
25       <div class="row g-4 justify-content-center px-4">
26         <h1>Welcome, {{ $username }}!</h1>
27         <!-- First Row: 2 Columns -->
28         <div class="col-md-6 col-sm-12 mb-4">
29           <a href="form">
30             <div class="card-container">
31               <div class="card p-3 wedding-card"> <!-- Added wedding-card class -->
32                 <div class="card-body">
33                   <h5 class="card-title"><b>Wedding</b></h5>
34                   <p>Description of wedding event.</p>
35                 </div>
36               </div>
37             </div>

```

This is the homepage looks like when the organizer Log in (Temporarily Layout)

Role Controller

```
RoleController.php X
app > Http > Controllers > RoleController.php
1  <?php
2  namespace App\Http\Controllers;
3
4  use Illuminate\Http\Request;
5
6  class RoleController extends Controller
7  {
8      // Handle Admin Login
9      public function adminLogin(Request $request)
10     {
11         $username = $request->input('username');
12         $password = $request->input('password');
13
14         // Fixed Admin password check
15         if ($password === 'admin') {
16             return view('admindashboard', ['username' => $username]); // Pass username to view on success
17         } else {
18             // Redirect to error page if credentials are incorrect
19             return redirect()->route('error.page');
20         }
21     }
22
23     // Handle Organizer Login
24     public function organizerLogin(Request $request)
25     {
26         $username = $request->input('username');
27         $password = $request->input('password');
28
29         // Fixed Organizer password check
30         if ($password === 'organizer123') {
31             return view('homepage', ['username' => $username]); // Pass username to view on success
32         } else {
33             // Redirect to error page if credentials are incorrect
34             return redirect()->route('error.page');
35         }
36     }
37 }
```

This will handle the user login functionality based on roles (Admin and Organizer)

1. adminLogin Method

This will handle the login process for the admin user obtaining the incoming request, username and password.

The **Logic** Behind This:

- The password is checked against the hardcoded value 'admin'.
- If the password matches, the method returns the admindashboard view and passes the -username to the view.
- If the password does not match, the user is redirected to the error page via `return redirect()->route('error.page')`

2. orginazerLogin Method

This will handle the login process for the admin user obtaining the incoming request, username and password.

The Logic Behind This :

- The password is checked against the hardcoded value 'organizer123'.
- If the password is correct, the method returns the homepage view, passing the username to the view.
- If the credentials are incorrect, the user is redirected to the error page.

Routes

```
web.php x
routes > web.php
1  <?php
2
3  use Illuminate\Support\Facades\Route;
4  use App\Http\Controllers\HomeController;
5  use App\Http\Controllers\RoleController;
6
7  Route::get('/home', [HomeController::class, 'home'] )->name('homepage');
8  //calling controller HomeController para ma view yung function na home na maga call sa view na homepage
9  Route::get('/form', [HomeController::class, 'form'] )->name('form');
10
11 Route::get('/', function () {
12     return view('user_role');
13 }->name('role');
14
15 Route::post('/user/admin', [RoleController::class, 'adminLogin']->name('login.admin');
16 Route::post('/user/organizer', [RoleController::class, 'organizerLogin']->name('login.organizer');
17
18 // Error page route
19 Route::get('/error', function () {
20     return view('error'); // Error view
21 }->name('error.page');
22
23 Route::get('/some-route', [SomeController::class, 'someMethod']->middleware('check.login.error');
```

The Function of this web.php is to defune URIs that map to controller methods and views.

- **/home**: Maps to the home method of HomeController to return the homepage view.
- **/form**: Maps to the form method of HomeController for displaying a form.
- **/ (Root)**: Displays the user_role view for user role selection.
- **/user/admin**: POST route for admin login. Calls adminLogin in RoleController.

- **/user/organizer:** POST route for organizer login. Calls organizerLogin in RoleController.
- **/error:** Displays the error view when login fails.
- **/some-route:** An example route with middleware for error checking.
